

A STUDY ON NATIVE PLANTS APPLICABILITY IN PLANT WORKS FOR ACID SOIL SLOPE IN SNOWY COLD REGION

Abstract: We reviewed present condition and problems in plant works for acid soil slope in snowy cold region by surveying existing literature, and found some native plants which had acid-resistant by field research in acid soil slopes in Hokkaido. By the survey, we concluded that it is useful to construct new plant work method with these acid-resistant plants in snowy cold region.

Key words: acid soil, native plants, plant works, snowy cold region
